Web Designer & Full Stack Developer · UX/UI Specialist

## PROFESSIONAL SUMMARY

I'm a web designer and developer who genuinely loves what I do. I've spent years working with clients across healthcare, manufacturing, and beyond — taking their ideas and turning them into websites that look great, feel intuitive, and actually perform. I'm comfortable everywhere in the stack, from sketching out wireframes in Figma to writing server-side logic in Node.js, and I think that full-picture perspective makes a real difference in the final product. I care a lot about the details, I communicate well, and I'm always focused on building something the client is proud of.

## CORE SKILLS & TECHNOLOGIES

### DESIGN & PROTOTYPING

Figma · Adobe XD · Photoshop · Illustrator · Wireframing · UX/UI Principles

### FRONTEND DEVELOPMENT

React · Next.js · JavaScript (ES6+) · HTML5 · CSS3 · Responsive Design

### BACKEND & INFRASTRUCTURE

Node.js · Server Management · REST API Integration · Deployment & Hosting

### COLLABORATION & WORKFLOW

Client Communication · Cross-functional Teamwork · Agile Workflow · Performance Optimization

## FEATURED PORTFOLIO PROJECTS

### Quest Orthodontics

[questorthodontics.com](https://questorthodontics.com)

Orthodontics / Healthcare · Sandy Springs & Decatur, GA

This was a fun one — Quest is a really forward-thinking practice and they wanted a site that matched that energy. I built something clean and modern that puts their technology front and center, with a flow that makes it easy for patients to learn about their options and book a visit without any friction.

### MyOrthodontist

[myorthodontistnc.com](https://myorthodontistnc.com)

Orthodontics / Healthcare · Multi-location, North Carolina

Multi-location sites have their own set of challenges — you have to make it easy for someone to find the right office without getting lost. I focused a lot on the navigation and information architecture here so that patients across all their North Carolina locations could get where they needed to go quickly.

### Smile Worthy Orthodontics

[smileworthyortho.com](https://smileworthyortho.com)

Orthodontics / Healthcare · Orland Park, IL

Dr. Eckenstein wanted the site to feel warm and personal, not clinical. I leaned into that — the design is approachable and friendly while still looking polished and professional. The goal was for a new patient to land on the page and immediately feel like they were in good hands.

### Ehrmantrout Orthodontics

[ehrmantroutorthodontics.com](http://ehrmantroutorthodontics.com)

*Orthodontics / Healthcare · Las Vegas, NV*

Ehrmantrout is a well-established practice and they needed a site that reflected that reputation. I kept the design clean and confident, making sure the things that set them apart — their technology, their team, the little extras they offer patients — were easy to find and hard to ignore.

### Bright Life Chiropractic

[brightlifechiropractic.com](http://brightlifechiropractic.com)

*Chiropractic / Healthcare · Savannah, GA*

Bright Life had a ton of social proof — hundreds of great reviews, years of experience — and they just weren't showing it off. I redesigned the site to lead with that credibility, added strong calls to action, and made sure the whole thing loaded fast. It's the kind of site that turns a curious visitor into a booked appointment.

### Kirkco Corporation

[kirkcocorp.com](http://kirkcocorp.com)

*Industrial Manufacturing / Chemical Processing Equipment*

Kirkco was a different kind of project — their audience is engineers and procurement teams, not everyday consumers. I had to take really dense technical content and organize it in a way that felt clear and credible without dumbing anything down. It was a good challenge and I'm proud of how it came together.

## PROFESSIONAL EXPERIENCE

### Freelance Web Designer & Full Stack Developer

20XX – Present

*Independent / Contract*

- › Handle projects start to finish — from early design conversations and wireframes all the way through to launch and server setup.
- › Work directly with clients to figure out what they actually need, not just what they ask for, and translate that into something that works well for their users.
- › Have worked across a pretty wide range of industries — orthodontics, chiropractic, industrial manufacturing — and I enjoy the challenge of learning a new space quickly.
- › Keep relationships going long after launch because good work leads to trust, and trust leads to better projects.

## EDUCATION

### B.S. in Web Design & Development (Coursework Completed — Degree Not Conferred)

2016 – 2019

*Neumont University · Salt Lake City, UT*

*I'm always up for a good project — feel free to reach out.*
